Steel Grit Valve

SGV Steel Grit Valve

The Airblast SGV Steel Grit Valve is designed for the precise metering of abrasive into the compressed air flow at the outlet of a blast machine.

The SGV Steel Grit Valve is suitable for metering heavy or aggressive abrasive materials, such as steel shot and grit, chilled iron grit or aluminium oxide. The SGV Steel Grit Valve design prevents the valve body from coming into contact with the abrasive stream. The abrasive stream only touches the rubber liner, which may be quickly replaced when worn. The abrasive is metered by means of closing the rubber pipe by an adjustment screw.

Airblast offers a full selection of metering valves. Contact Airblast to discuss which metering valve is most suitable for your specific application.
